

Front Range

Colorado Thermal Imaging

Thermal Imaging will show you where you can save Energy and \$\$\$

High heating and cooling bills are often caused by poor insulation or unwanted air leaks. We offer complete home energy audits, our Infrared Thermal Imaging Technology can pinpoint energy loss locations non-invasively so you can instantly see where the problem is. **After locating and identifying the problem areas, fixing them is often simple and affordable.**

Thermal Imaging can find problems that you can't see, by finding out where your home is losing energy, giving you the knowledge so you can fix the problem areas and save \$\$\$ on your energy bills.

Thermal Imaging Can Find

- Missing or insufficient insulation — in walls, ceiling and attics.
- Furnace heating duct leaks
- Air Leaks around windows and doors
- Roof Leak Location
- Hidden Water Leaks

Front Range Colorado Thermal Imaging will take Infrared Thermal Images of your home inside and out. You accompany us during the process and are able to ask question and see where the problem areas are. We provide a report outlining the areas where you are losing energy or have water leaks, giving you the information you need to fix the problems yourself or hire a contractor to do the repairs.

Front Range Colorado Thermal Imaging is not a building contractor, we do not do the repairs so we have no other vested interest, our reports are unbiased and for your benefit to use as you need.

Finding out where you can save energy is affordable starting at only \$250.00 for a 1500 sq ft home.
